

Performance Monitoring for Mobile Networks

Service Assured Access Solutions

Your Benefits:

- Monitoring and troubleshooting backhaul performance, including LTE X2, S1 traffic path
- Service activation tests (RFC-2544/Y.1564) and continuous performance monitoring
- PM Controller functionality supports Y.1731, TWAMP, ICMP Echo ("ping"), and UDP Echo opposite RAD devices or third-party responders
- High precision one-way measurements opposite any TWAMP responder
- RADview Performance Monitoring portal for SLA reporting
- Enhanced service assurance with MiNID:
 - Easy plug-and-play installation in existing backhaul networks
 - L2/L3 test generation and response capabilities

Products Included in this Solution:

MiNID
Miniature Programmable Network Interface Device

PM Controller
Performance Monitoring Generator

RADview
Network Management and Orchestration
